Subject: Call to discuss TASC program and community request for technical advisor

Hi Everyone,

I had a call this morning with Kirby Webster from the TASC program. She would like to set up a call with as many people as possible so she can explain a little more about how TASC works but more importantly, to hear from you your major concerns about what type of technical assistance you are looking for. TASC is prepared to provide a technical advisor (or more than one if needed) to read, summarize and comment on the EPA documents related to OU3 – Groundwater. Under the Technical Directive issued by the national EPA contract, TASC can also provide other assistance such as preparing fact sheets, meeting summaries, attending a certain number of meetings, etc.

We can try and schedule a time when everyone who is interested can call in (which might be difficult with everyone's schedules) or we could set up a couple different calls that are convenient for all. Kirby's schedule is open next week so if you could get back to me with some options, I'd appreciate it. I believe Kirby has an advisor in mind, but she would prefer to hear your concerns about expertise, qualifications, etc. before contacting that person.

I look forward to hearing from you.

Thanks,

Pat

PS – I haven't forgotten about helping you reorganize the CAG. You'll hear from me tomorrow about that.
